

Introduction to Astrology

Astrology is the study of the positions and movements of celestial bodies and how they influence human behavior.

The zodiac is divided into twelve signs, each associated with specific personality traits.

Aries is known for being energetic and courageous, while Taurus is associated with stability and patience.

Gemini represents adaptability and communication, whereas Cancer is linked to emotions and nurturing.

Astrologers use birth charts, which map the positions of planets at the time of a person's birth.

These charts are believed to provide insights into personality and life events.
